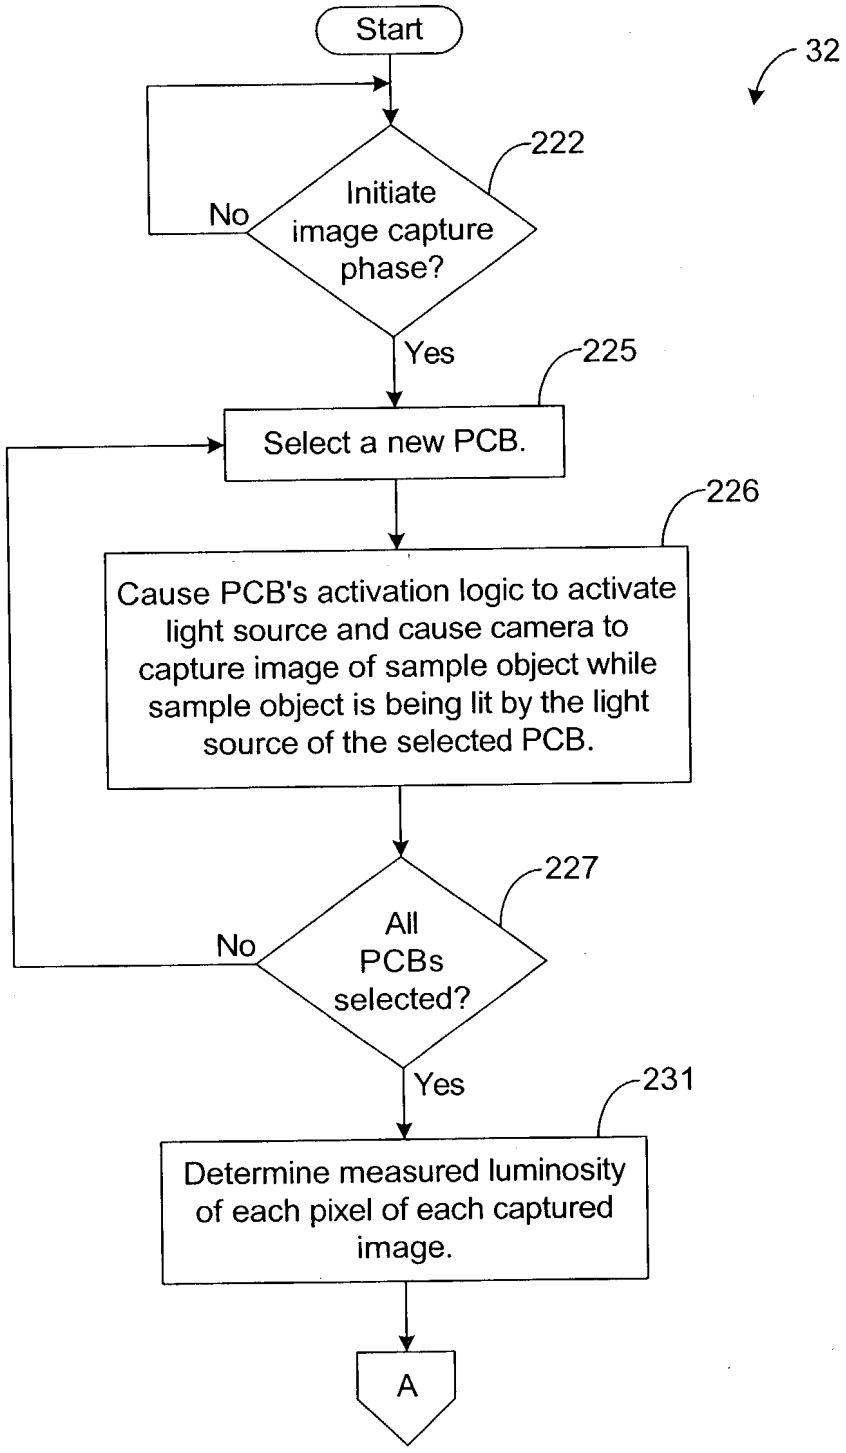
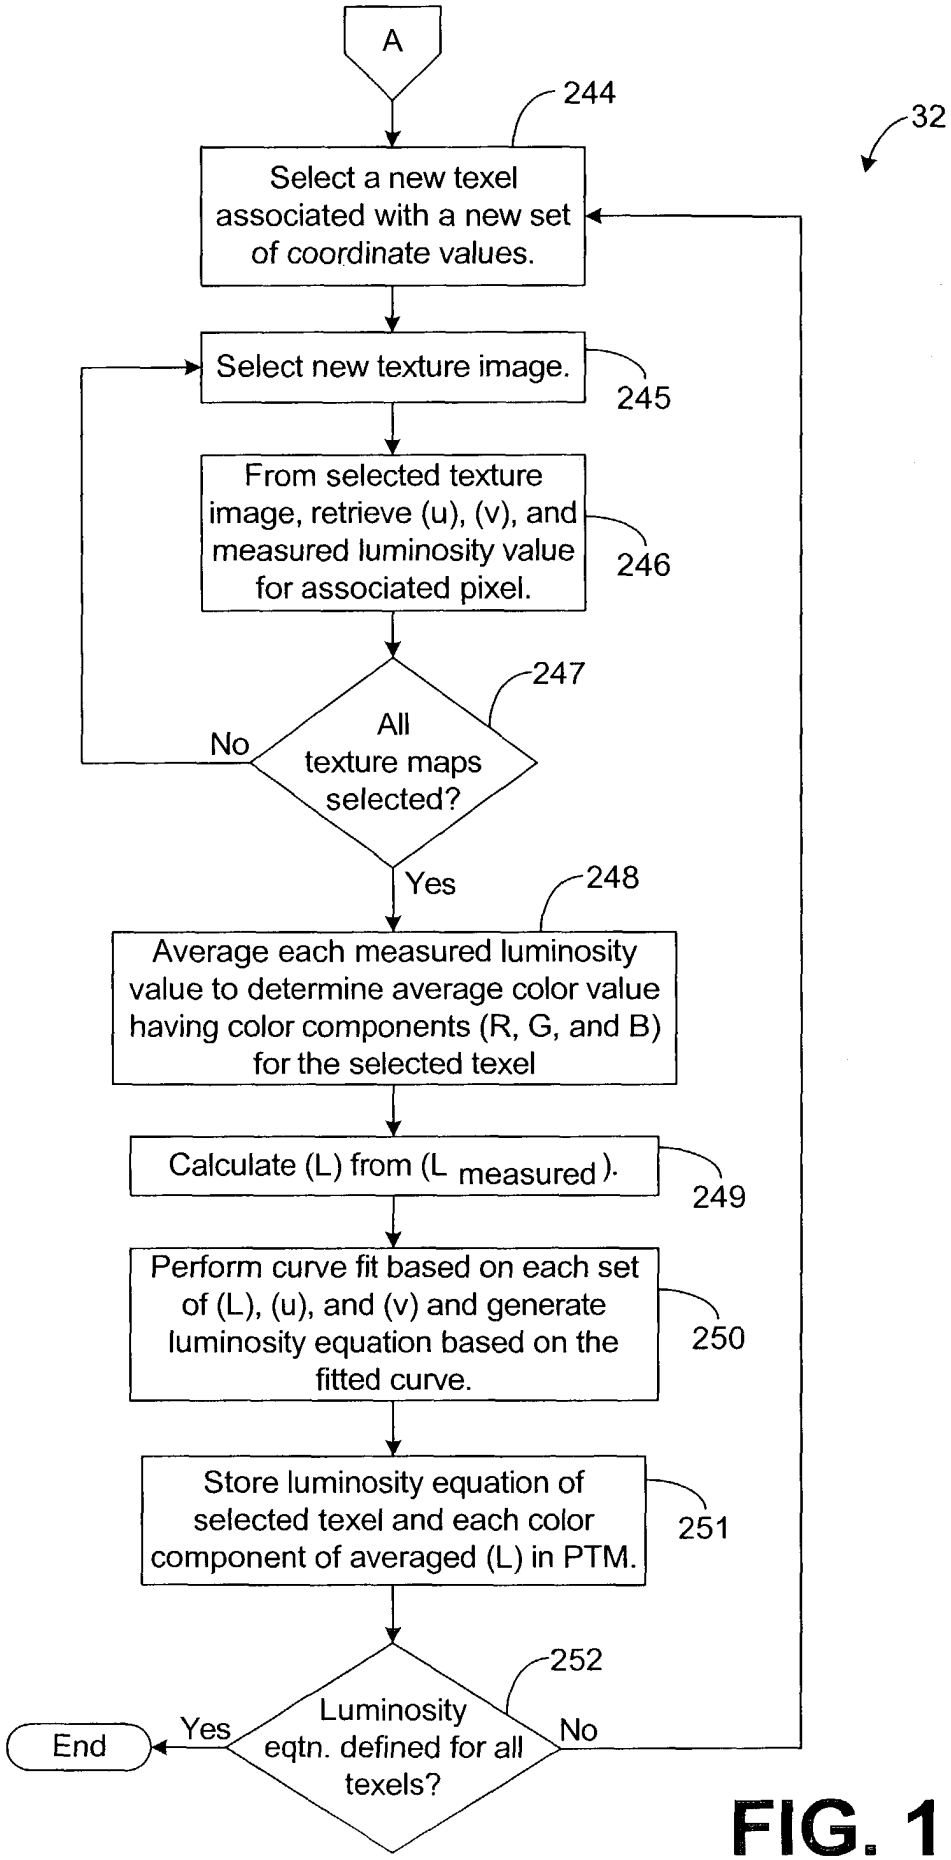
FIG. 9



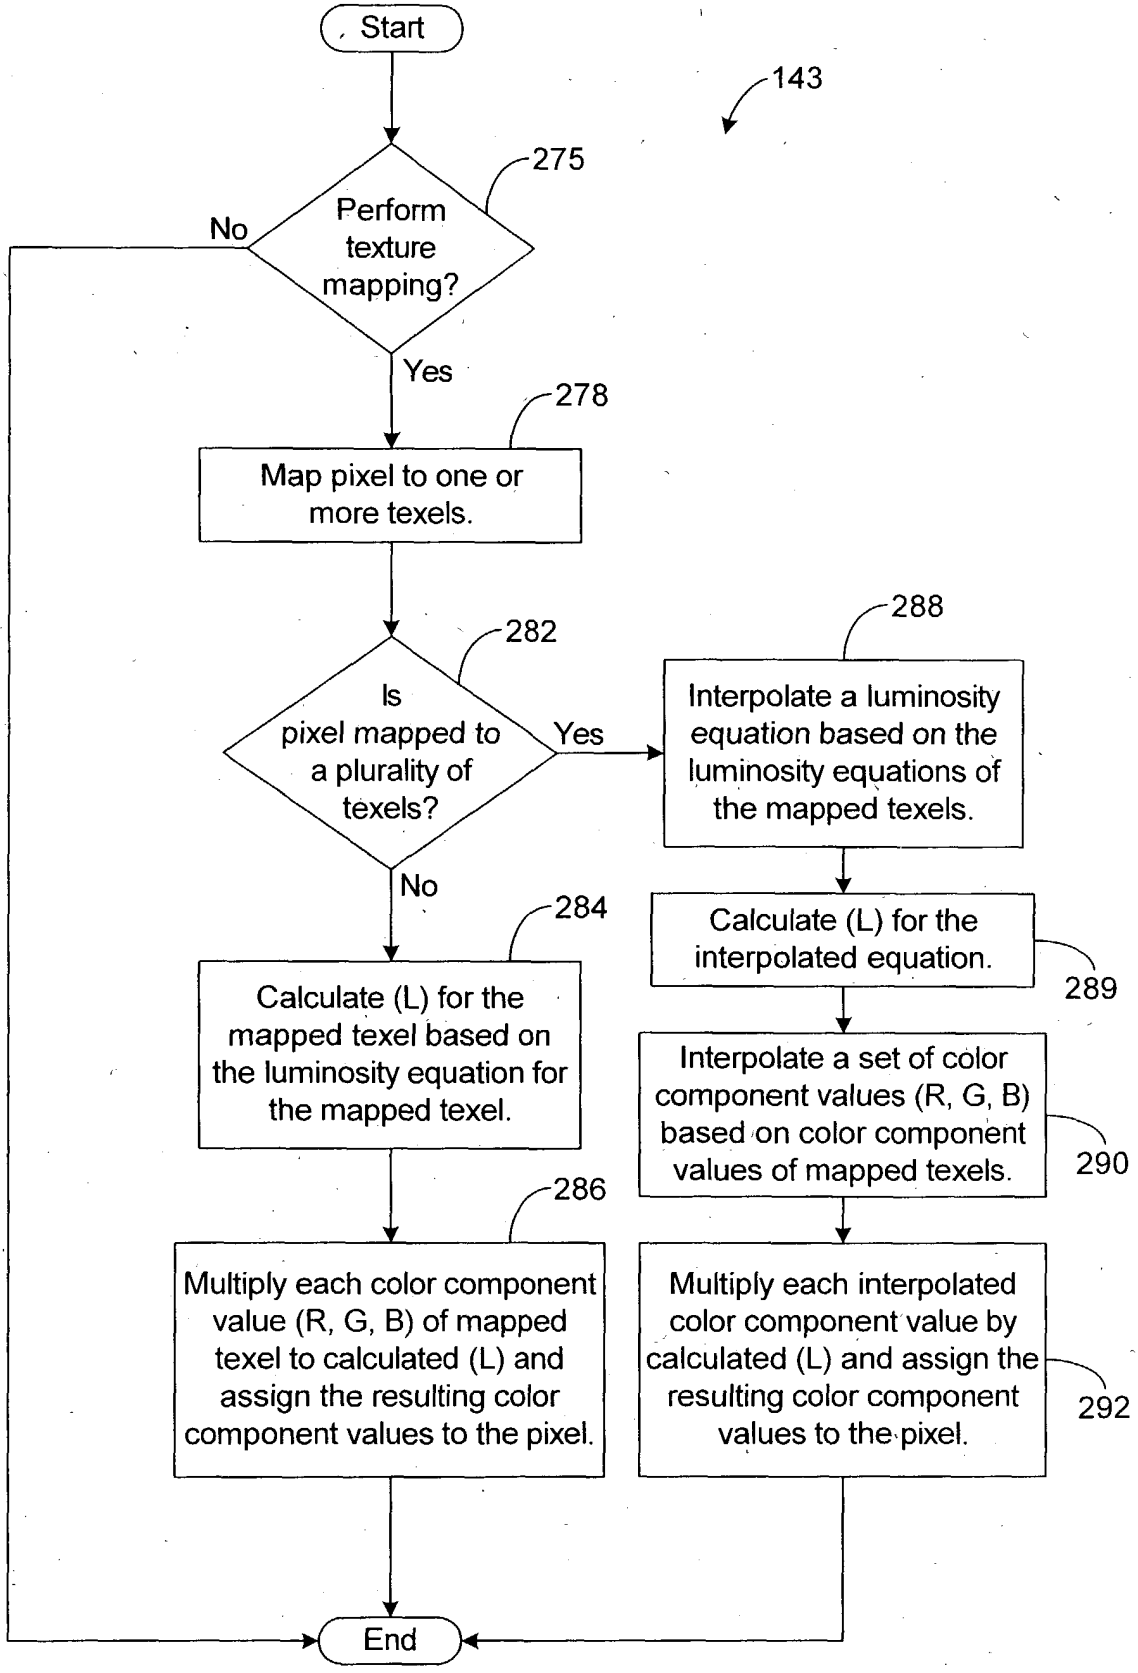
Start
32
222
Initiate image capture phase?
No
Yes
225
Select a new PCB.
226
Cause PCB's activation logic to activate light source and cause camera to capture image of sample object while sample object is being lit by the light source of the selected PCB.
227
All PCBs selected?
No
Yes
231
Determine measured luminosity of each pixel of each captured image.
A

FIG. 10



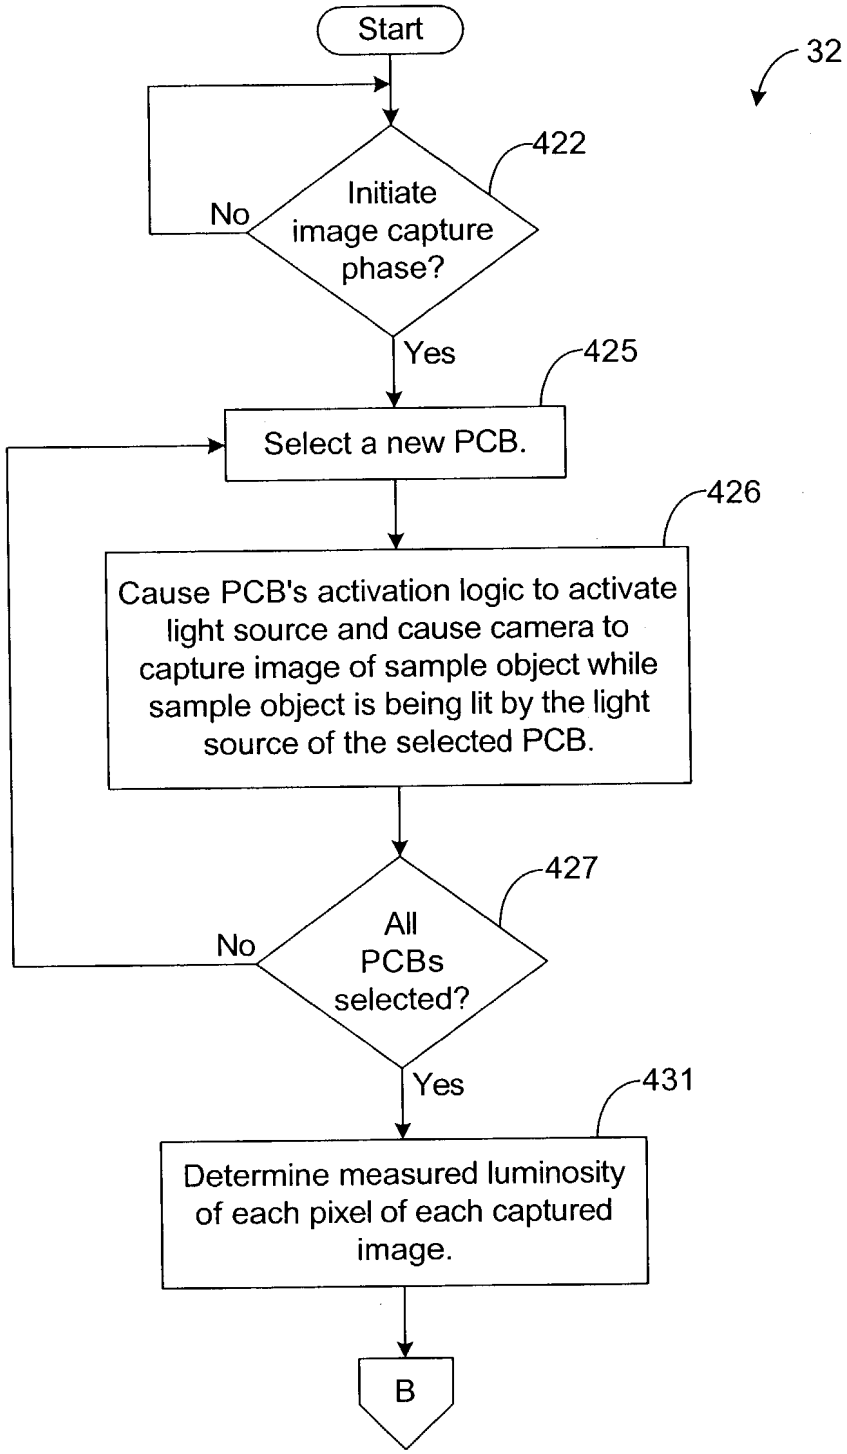
A
244
32
Select a new texel associated with a new set of coordinate values.
Select new texture image.
245
From selected texture image, retrieve (u), (v), and measured luminosity value for associated pixel.
246
247
All texture maps selected?
No
Yes
248
Average each measured luminosity value to determine average color value having color components (R, G, and B) for the selected texel
Calculate (L) from (L measured).
249
Perform curve fit based on each set of (L), (u), and (v) and generate luminosity equation based on the fitted curve.
250
Store luminosity equation of selected texel and each color component of averaged (L) in PTM.
251
252
Luminosity eqtn. defined for all texels?
Yes
No
End

FIG. 11



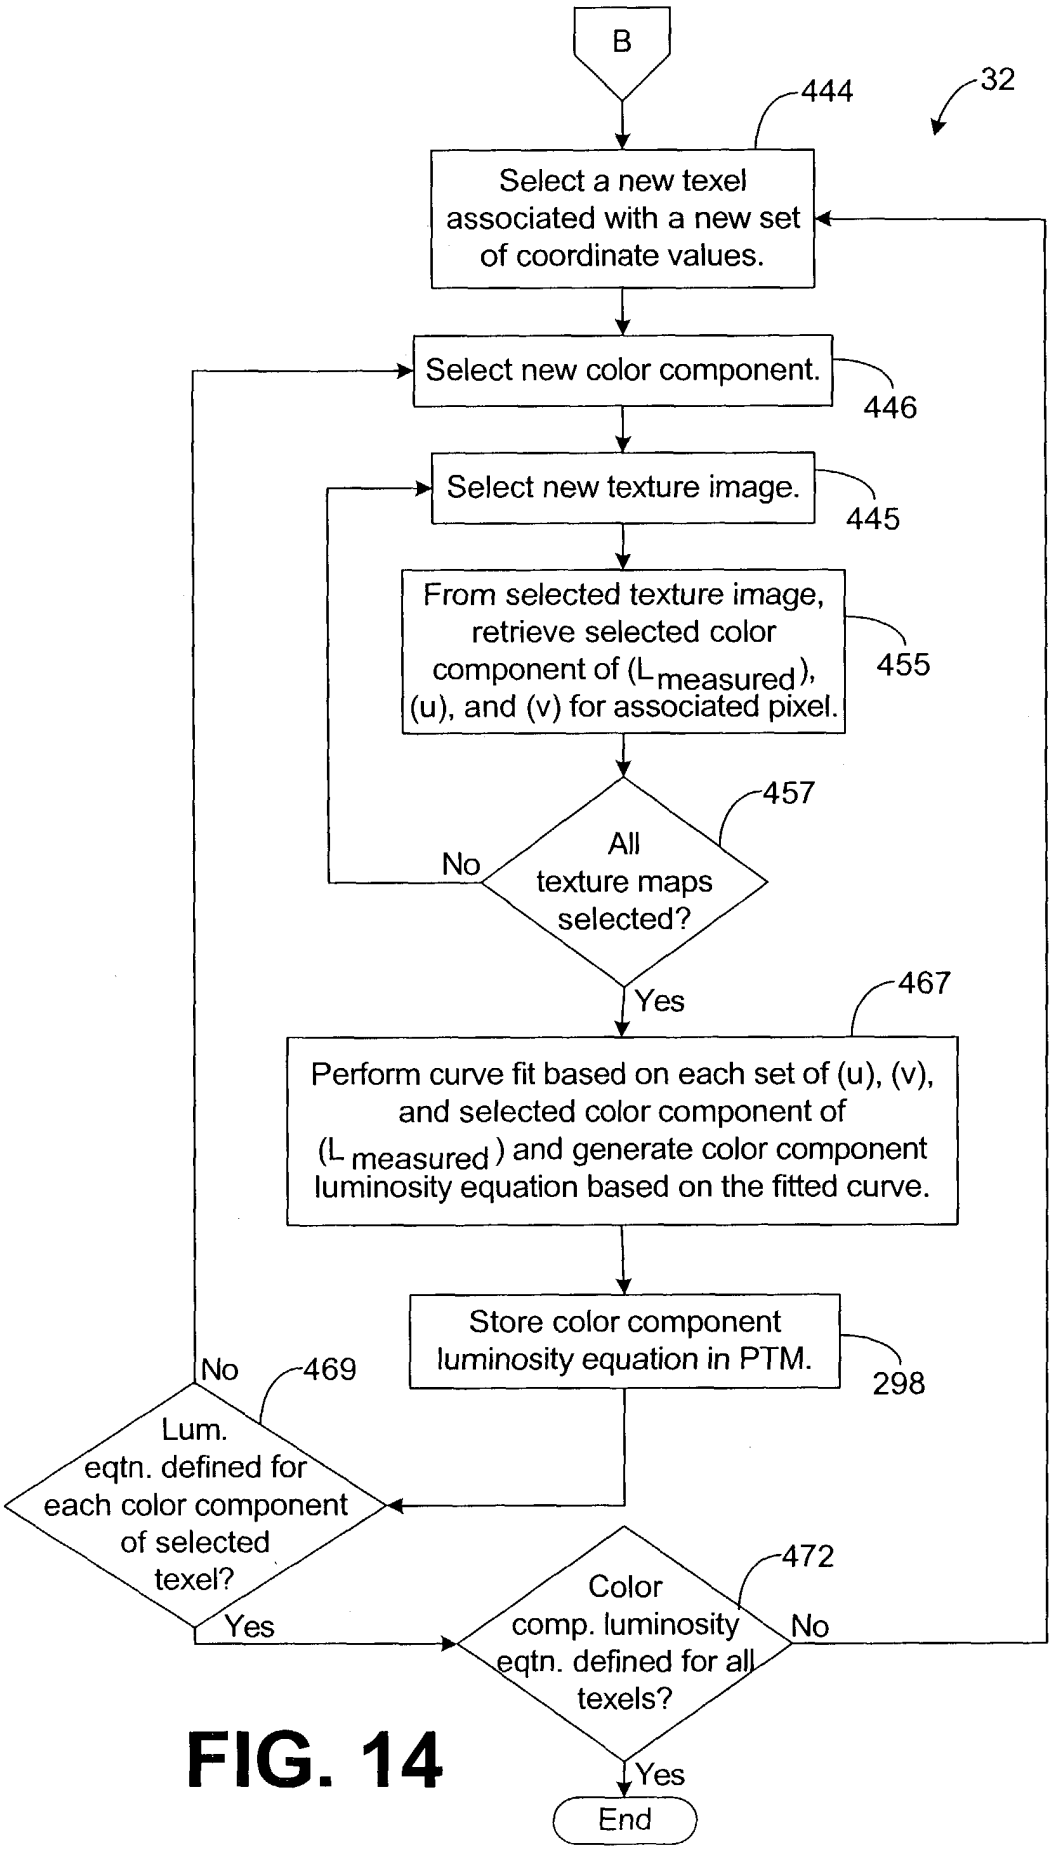
Start
143
275
Perform texture mapping?
No
Yes
278
Map pixel to one or more texels.
282
Is pixel mapped to a plurality of texels?
Yes
No
288
Interpolate a luminosity equation based on the luminosity equations of the mapped texels.
Calculate (L) for the interpolated equation.
289
Interpolate a set of color component values (R, G, B) based on color component values of mapped texels.
290
284
Calculate (L) for the mapped texel based on the luminosity equation for the mapped texel.
286
Multiply each color component value (R, G, B) of mapped texel to calculated (L) and assign the resulting color component values to the pixel.
Multiply each interpolated color component value by calculated (L) and assign the resulting color component values to the pixel.
292
End

FIG. 12



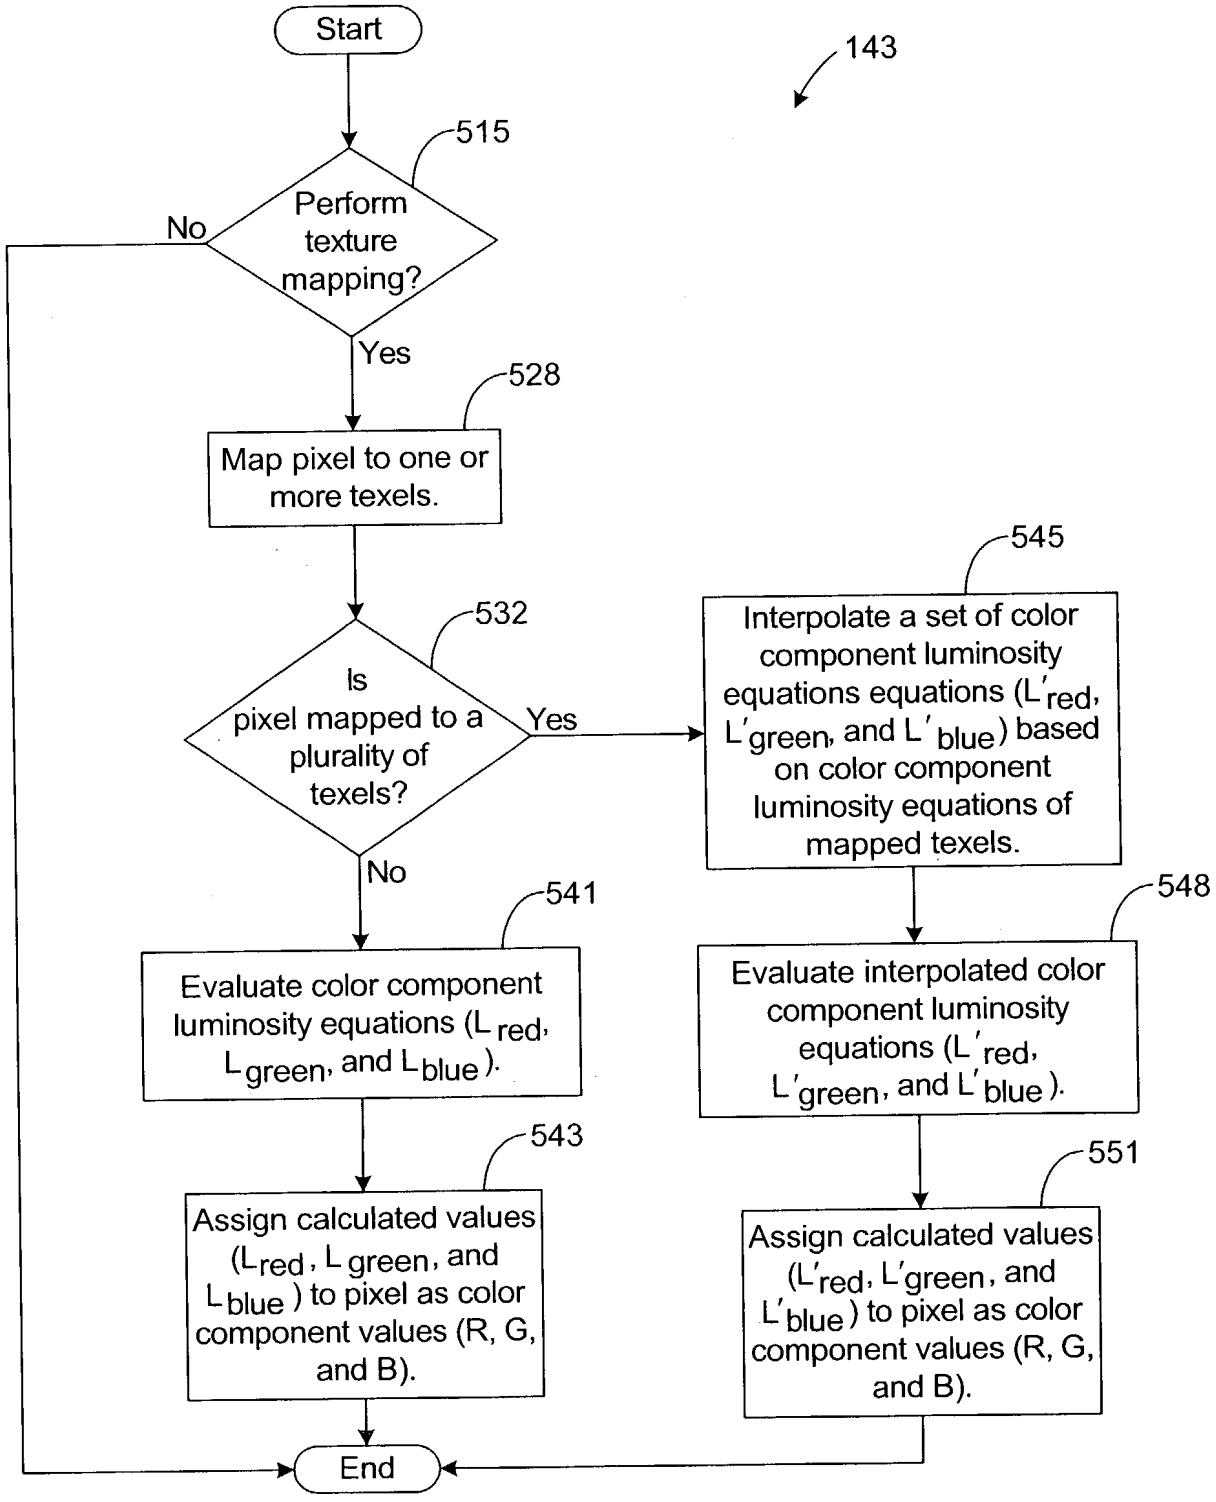
Start
32
422
Initiate image capture phase?
No
Yes
425
Select a new PCB.
426
Cause PCB's activation logic to activate light source and cause camera to capture image of sample object while sample object is being lit by the light source of the selected PCB.
427
All PCBs selected?
No
Yes
431
Determine measured luminosity of each pixel of each captured image.
B

FIG. 13



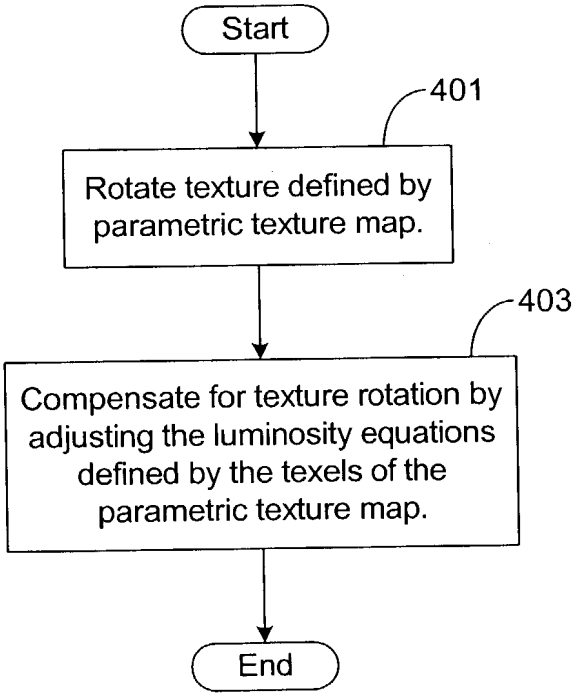
B
444
32
Select a new texel associated with a new set of coordinate values.
Select new color component.
446
Select new texture image.
445
From selected texture image, retrieve selected color component of ($L_{measured}$), (u), and (v) for associated pixel.
455
457
All texture maps selected?
No
Yes
467
Perform curve fit based on each set of (u), (v), and selected color component of ($L_{measured}$) and generate color component luminosity equation based on the fitted curve.
Store color component luminosity equation in PTM.
298
No
469
Lum. eqtn. defined for each color component of selected texel?
Yes
472
Color comp. luminosity eqtn. defined for all texels?
No
Yes
End

FIG. 14



Start
143
515
Perform texture mapping?
No
Yes
528
Map pixel to one or more texels.
532
Is pixel mapped to a plurality of texels?
Yes
No
545
Interpolate a set of color component luminosity equations equations (L'red, L'green, and L'blue) based on color component luminosity equations of mapped texels.
548
Evaluate interpolated color component luminosity equations (L'red, L'green, and L'blue).
551
Assign calculated values (L'red, L'green, and L'blue) to pixel as color component values (R, G, and B).
541
Evaluate color component luminosity equations (Lred, Lgreen, and Lblue).
543
Assign calculated values (Lred, Lgreen, and Lblue) to pixel as color component values (R, G, and B).
End

FIG. 15



Start
401
Rotate texture defined by parametric texture map.
403
Compensate for texture rotation by adjusting the luminosity equations defined by the texels of the parametric texture map.
End

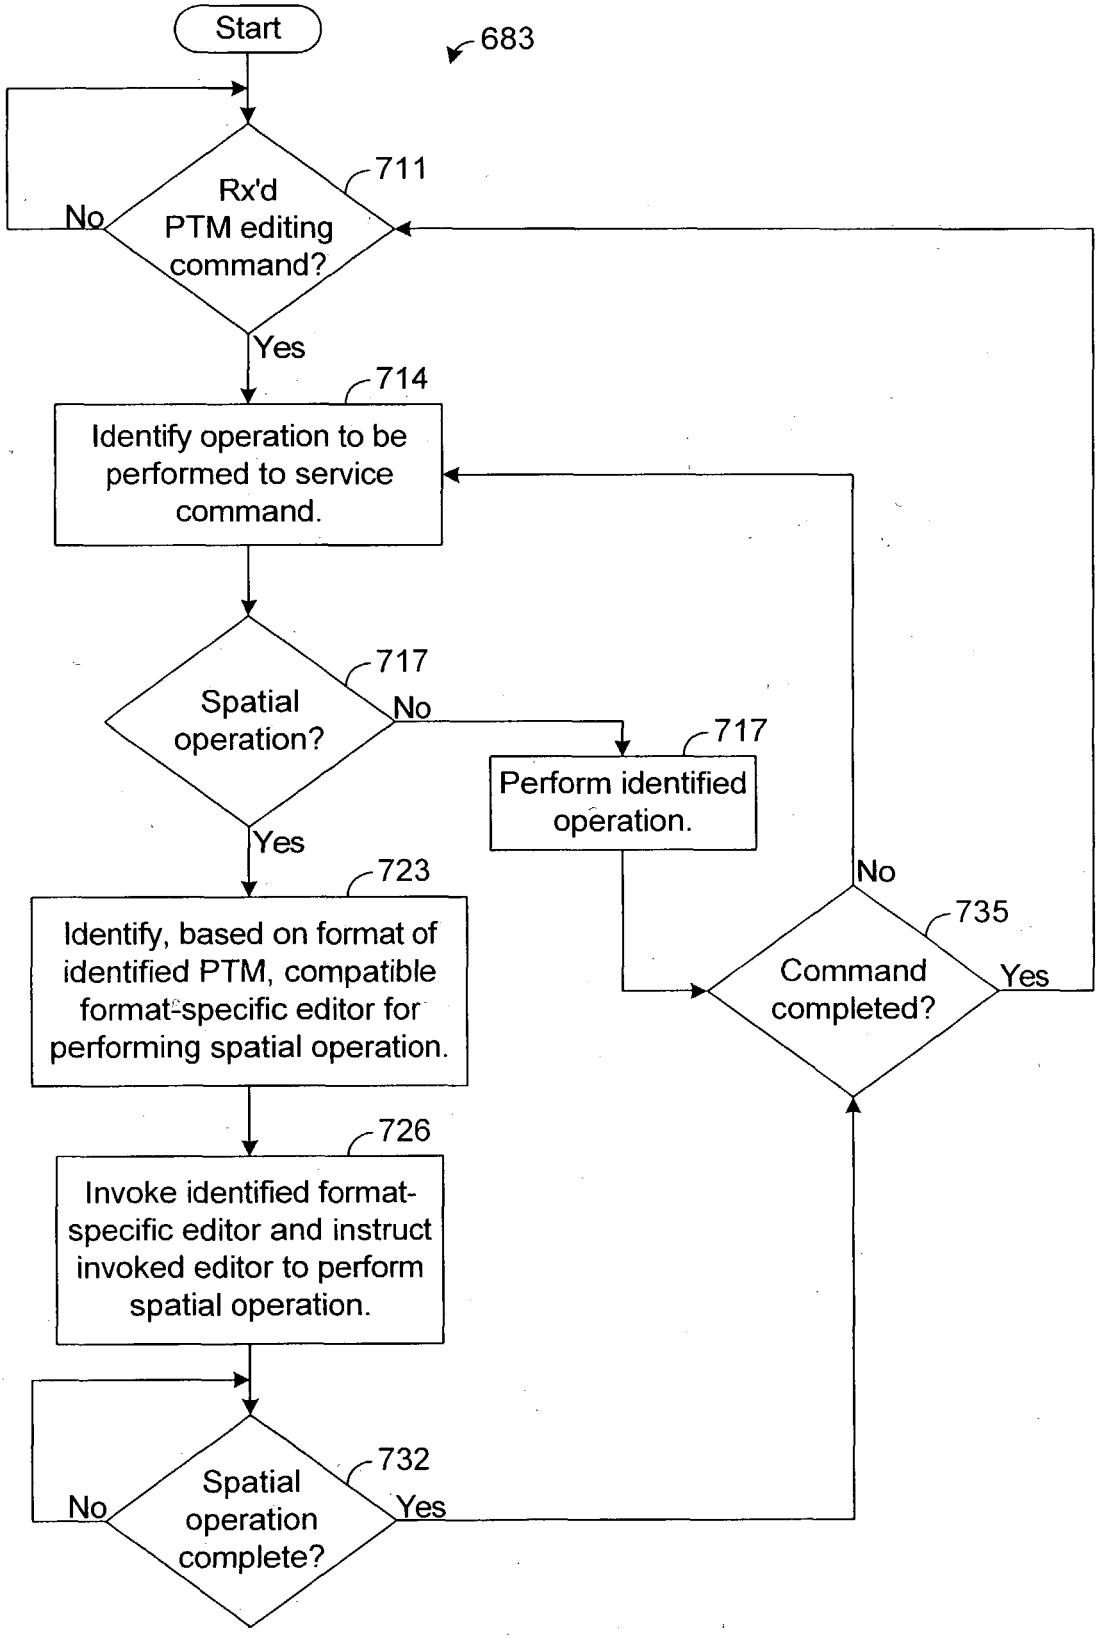
FIG. 17



Start
683
Rx'd PTM editing command?
711
No
Yes
Identify operation to be performed to service command.
714
Spatial operation?
717
No
Yes
Perform identified operation.
717
Identify, based on format of identified PTM, compatible format-specific editor for performing spatial operation.
723
Command completed?
735
No
Yes
Invoke identified format-specific editor and instruct invoked editor to perform spatial operation.
726
Spatial operation complete?
732
No
Yes
